Summary

Computer Science engineering student (CGPA: 9.03/10) with hands-on backend development experience using Java, Spring Boot, REST APIs, and SQL, alongside working knowledge of React for full-stack delivery. Solved 100+ Data Structures and Algorithms problems in Java. Built academic and personal projects involving backend services, CRUD workflows, API design, and real-time dashboards. Strong foundation in OOP, DSA, Operating Systems, and DBMS.

Education

Vellore Institute of Technology
B.Tech in Computer Science and Engineering

2023 – Present
CGPA: in the 9.03 / 10.0

Software Development Projects

Emergency Management & Dispatch System

[GitHub](#)

- Developed a centralized backend application for emergency reporting, responder assignment, incident tracking, and operational coordination.
- Designed role-based workflows and REST APIs for operators, responders, and administrators to support structured, concurrent multi-user access.
- Built a real-time status dashboard focused on improving information clarity and enabling faster decision-making during active incidents.

AI Mock Interview Platform

[GitHub](#)

- Developed an AI-powered web application that evaluates candidate responses and generates structured, role-specific interview feedback.
- Built backend services using Spring Boot with persistent performance history for tracking interview KPIs over time.
- Implemented the interview workflow and responsive dashboard using React and Tailwind CSS, integrating frontend and backend functionality.

Autonomous Software Debugging Agent

[GitHub](#)

- Developed an AI-powered software debugging system that analyzes source code, identifies potential bugs, and assists in generating debugging solutions.
- Built a multi-agent workflow using Python, LangGraph/LangChain, AST/Tree-sitter-based code analysis, and language-specific adapters for automated debugging.
- Integrated automated test execution and result analysis with FastAPI and SQLite to support structured debugging workflows and persistent issue tracking.

Technical Skills

- **Programming:** Java, JavaScript, SQL
- **Core CS:** Data Structures & Algorithms, Operating Systems, Object-Oriented Programming, DBMS
- **Backend:** Spring Boot, REST APIs
- **Frontend:** React, Tailwind CSS
- **Tools:** Git, GitHub, Docker, IntelliJ IDEA, VS Code
- **AI / LLM:** Groq API, Llama, LLM Prompting, AI Evaluation Workflows

Achievements & Certifications

- NPTEL Elite Certification: Market Analysis – scored 95%.
- Competitive Programming: Solved 100+ Data Structures and Algorithms problems on LeetCode and Geeks-ForGeeks using Java.
- Open Source: Maintain public GitHub repositories containing organized project code and programming solutions.

Leadership & Activities

- **Pahadi Club:** Managed end-to-end logistics for cultural events, including scheduling, venue setup, member communication, and event coordination.
- **EV Club:** Coordinated volunteers, timelines, and logistics during technical workshops and club meets.
- **College Events:** Anchored official college events, managing live audience engagement and smooth transitions under time pressure.
